## DETAILED ACTION

### *Election/Restrictions*

1. This application contains claims directed to the following patentably distinct species of the claimed invention:

Group 1, claims **25-30** are drawn to a computer system having a CPU, an input interface coupled to CPU, a memory device including a SRAM array having first load device, first ultrathin transistor having power electrode coupled to the first load device, a second load device, and a second ultrathin transistor including a power electrode coupled to the second load device, wherein the first load device is merged with a control electrode of the second ultrathin transistor and vice versa;

Group 2, claims **38-44** are drawn to a process of tuning a SRAM cell OFF comprising of the step of "increasing a voltage applied to a switch in the SDR.AM cell above a threshold voltage for that switch";

Group 3, claims **45-49** are drawn to a process of writing a SRAM cell including two switches, where one switch is coupled to a row address line and a column address line, to an ON state, comprising the step of "modifying a voltage coupled to the row address line to cause a voltage applied to a control electrode of the one switch to exceed a threshold voltage for that switch";

Group 4, claims **50-55** are drawn to a process for reading data from a SRAM cell including first and second transistors, comprising the steps of "increasing a voltage across a portion of the cell including two power electrodes of one of first and second

transistors" and "monitoring a current through the power electrodes of the two transistors".

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Viet Q. Nguyen whose telephone number is (571) 272-1788. The examiner can normally be reached on 7am-6pm (EST).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Hoai Ho can be reached on (571) 272-1777. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
